SUMMARY

- Results-driven Full-Stack Engineer with a proven track record of building and shipping impactful software products with around 6 years of work experience.
- Proficient in front-end development using **React.js**, **Next.js**, **Redux**, **Tailwind CSS**, and **Material UI**, with a strong focus on performance and UX.
- Experienced with back-end frameworks like **Express.js**, **Django**, and **Laravel**, with hands-on work in REST API design, authentication (OAuth), and PostgreSQL.
- Skilled in designing and managing AWS-based infrastructure using services like **EC2**, **S3**, **CloudFront**, **DynamoDB**, **SES**, **SNS**, and **CloudWatch**, integrating CI/CD pipelines, and connecting systems with third-party APIs and services like **Stripe**, **Twilio** etc.
- Strong background in AI integrations, building interfaces that work with LLMs (**GPT**, **Gemini**, **Claude**, **Grok**), and developing chat-based and document-aware applications by integrating multiple LLMs.
- Familiar with agile workflows and dev tooling including **Git**, **Bitbucket**, **Jira**, **Trello**, and testing suites like **Jest**, **Puppeteer**, and **React Testing Library**.

WORK EXPERIENCE

Full Stack Developer

Toptal

📅 08/2021 - Present

- Designed and deployed a full-fledged AI assistant platform, integrating multiple LLMs (**GPT-4o**, **Gemini**, **Claude**, **Grok**) with support for sequential/parallel model execution and aggregated response logic.
 - Integrated **Stripe** payments for subscriptions and one-time billing with support for cards, bank transfers, and Apple Pay — including webhook handling and invoice workflows.
 - Worked on implementing robust authentication using **Auth0** and **OAuth** for both traditional login and social logins, while maintaining a custom **PostgreSQL** user table for full user lifecycle control.
 - Created highly performant dashboards and debugging tools using **React** and **Node js** to help track and improve data quality for data and ML pipelines with customizable, draggable, and resizable widgets. Architected reusable patterns to use **Highcharts** within the **React** framework.
 - Worked on a **React + Node js (Express js)** project where I implemented multi-user conference calling by integrating the **Twilio** API. Additionally, integrated third-party tools like **AVBot** to simulate car behavior for automated testing scenarios. Contributed to test coverage by writing comprehensive unit and integration tests using **Jest** for both the front-end (**React**) and back-end (**Node.js**) components of the application.
- Technologies – **React JS**, **Node js(Express js)**, **Typescript**, **Redux**, **Tailwind CSS**, **Open AI**, **Gemini**, **Anthropic**, **Lite LLM**, **Stripe**, **Highcharts**, **AWS(EC2, Dynamo DB, Cloudwatch, SES, SNS)** and **Django**.

SDE -II

Mobile Premier League

📅 12/2019 - 08/2021

- Collaborated with senior developers to enhance the customer support dashboard built using **React JS** and **Node JS**, contributing to key feature design and implementation.
- Developed crucial features for managing fraud incidents and also built refund processing workflows, scheduled cron jobs for automation, and integrated **Slack** for real-time alerting. Additionally, I optimized and debugged backend services, **improving performance by 30%** by leveraging caching with **Redis**, background job processing using **BullMQ**, and database query optimization.
- Troubleshooting and debugging the **React** application, working on optimising the application consisted of more than 50 modules to improve functionality and performance by 40% by using profiler tools and react performance methods (like **useMemo**, **React.memo**, **useCallback**) as well as using infinite scrolling.
- Worked on writing end-to-end tests using **Jest** and **Puppeteer**, and integrated **Slack** to receive error messages in case any of the pull requests fail any of the E2E tests. In case of failed e2 test, the PR is reverting ensuring the production environment runs hassle free.
- Technologies – **React JS**, **Node JS**, **Typescript**, **Jest**, **Puppeteer**, **Redux**, **Tailwind CSS** and **Git**

Software Developer

GeekyAnts

📅 01/2019 - 11/2019

- Assisted in building a large-scale web application for buying and retail sports equipment that caters to **around 5,000 concurrent users**. Created extensive test coverage for all new features, reducing customer complaints by 10%.
- Integrated Twilio for one of the call center-based applications that manage incoming and outgoing calls along with other key functionalities.
- Created an event managing calendar that helps in adding events by integrating react big calendar and modifying it as per the client's requirement.
- Technologies - **HTML, CSS, React, Typescript, GIT, GitHub and Redux.**

SKILLS

Frontend - React JS, Next JS, Javascript, Tailwind CSS, Redux, Jest, Puppeteer, Typescript, HTML, CSS

Backend - Node js (Express js) , Python , Livewire

DevOps & Tools - AWS(EC2, S3, CloudFront, DynamoDB, SES, SNS, and CloudWatch), Git , BitBucket

Data & AI Integrations - OpenAI, Twilio, Stripe, Gemini, Anthropic, LiteLLM

Education

B.Tech (Computer engineering) - **LDRP Institute of Technology & Research**

CPI- 7.7

PROJECTS

AgentGG.ai

Tech Stack - React JS , Python , Django , Redux , Tailwind CSS , OpenAI , Gemini , Anthropic , Stripe , AWS S3 , AWS SES , AWS SNS , AWS ec , cloudwatch and oauth

- Designed and developed an AI-powered platform using React and Python(Django) enabling users to query multiple LLMs (GPT-4o, Gemini, Claude, Grok) in sequential or parallel modes, providing flexible response aggregation.
- Developed a sequential processing system, where AI responses feed into one another to generate a comprehensive, refined final answer, enhancing multi-AI collaboration.
- Built a tiered payment system using Stripe, offering free trials, monthly subscriptions, and additional token-based usage, mirroring enterprise- grade AI pricing models.
- Created a multi-user workspace allowing organizations to add users, allocate tokens, manage access permissions, and track usage analytics.
- Designed customizable user settings for fine-tuned AI interactions, including model preferences, conversation history, uploaded files, and API- based integrations for advanced users.
- Integrated Amazon DynamoDB, SES, and SNS, enabling efficient data storage, email notifications, and OTP authentication.

Whole Finance

Tech Stack - React JS , Node Js (Express js), Redux , Tailwind CSS , Highcharts , HTML , Stripe , Recharts, AWS , Socket and Open source LLMs

- Worked on building an AI tool but for the financial B2B market using React JS and Node Js(Express js).The users can easily generate reports for any company using all the information (for e.g. returns over 5 years , profit /loss etc) by typing a simple command . This command tool also enabled users to get any information(cash flow statement , returns etc) for any of the listed companies / cryptos.
- Worked on integrating Stripe as a payment solution. Integrated one-time solutions and recurring payment solutions.

Urgentem

Tech Stack - React JS , Node js (Express js) , Redux , Tailwind CSS , D3.js , CSS and Redux thunk

- Built the climate and ESG risk platform from the ground up using **React and Express.js**.Implemented complex algorithms for inference and climate prediction models.
- Assisted with graph integration for visually appealing data using D3.js. Worked on writing complex logic for calculations and statistics.
- Optimized the components for maximum performance across various devices and browsers.Oversaw the launch process and fixed live production bugs in a limited timeframe.
- Also worked on optimising the application to improve performance and making it robust.

Allegis -Cruise

Tech Stack - React js , Redux , Node Js Tailwind css , AWS EC2 and Twilio

- Worked on implementing multi-user conference calling by integrating the Twilio API. Additionally, integrated third-party tools like AVBot to simulate car behavior for automated testing scenarios.
- Contributed to test coverage by writing comprehensive unit and integration tests using Jest for both the front-end (React) and back-end (Node.js) components of the application.
- Fixed critical production bugs by investigating the issues with twilio voice calls and fixing the same.
